

SPECIFICATION AMENDMENTS

Page 11, in the Substitute Specification, lines 11 to 23, rewrite the paragraph to read as follows:

- In the illustrated embodiment, the forehead support element 6 is provided with connecting members 7 by way of which the forehead support element 6 can be coupled to a preferably cushioned forehead band. In the illustrated embodiment, the contact surface 8 of the forehead support element 6, which faces towards the forehead of the patient, is of a slightly concave configuration and in addition is adapted by a stiffening element (not shown here) to the individual contour of the forehead region of the patient, in terms of the curvature thereof. In the illustrated embodiment arranged in the contact surface 8 are a total of three electrode elements 9, 10 and 11, by way of which it is possible to detect electrical potentials in the forehead region of the patient. The forehead support element 6 is transverse to the tubular member 5 and has free ends on opposite sides of a central portion, an electrode 9, 11 being on each end and the other electrode 10 being on the central portion. - -
